

Publication Ethics and Publication Malpractice Statement

(Based on Elsevier recommendations and COPE's Best Practice Guidelines for Journal Editors)

Ethical guidelines for journal publication

The issue of an article in the **International Journal of Mathematics and Soft Computing** published by **SweDha Publications** is a process of permanent knowledge improvement. It is a direct reflection of the quality of work done by the authors and the institutions that support them. Peer-reviewed articles support and embody the scientific method. It is therefore important to agree upon the standards of the expected ethical behavior for all the parties involved in the act of publishing- the author, the journal editor, the peer reviewer, the publisher and the fellowship of society-owned or sponsored journals.

We, SweDha Publications takes our duties of guardianship over all the stages of publishing, extremely seriously and also we recognize our ethical and other responsibilities.

We ensure that advertising, reprint or any other commercial revenue has no impact or influence on the editorial decisions. In addition, the Editorial Board will assist in the communication with other journals and/or publishers which proves useful to the editors.

Duties of authors

Reporting standards

Authors of the reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient details and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are unacceptable. The review and the professional publication articles should also be accurate and objective. The editorial 'opinion' works should also be clearly identified.

Data access and retention

Authors may be asked to provide the raw data in connection with the paper for editorial review. In any event they should be prepared to retain such data for a reasonable time after publication.

Originality and plagiarism

The authors should ensure that their written work is entirely original. If the authors have used the work and/or words of others then that has to be appropriately cited or quoted.

Plagiarism takes many forms like 'passing off' another's paper as the author's own paper, copying or paraphrasing substantial parts of another's paper (without attribution), claiming results from research conducted by others. Plagiarism in all its forms constitutes unethical publishing behavior and is unacceptable.

Multiple, redundant or concurrent publication

An author should not publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behavior and is unacceptable. In general, an author should not submit a previously published paper for consideration in another journal.

Acknowledgement of sources

Proper acknowledgment should be given to the work of others. Authors should cite publications that have been influential in determining the nature of the reported work. Information obtained privately, as in conversation, correspondence, or discussion with third parties, must not be used or reported without explicit, written permission from the source. Information obtained in the course of confidential services, such as refereeing manuscripts or grant applications, must not be used without the explicit written permission of the author of the work involved in these services.

Authorship of the paper

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

Hazards and human or animal subjects

If the work involves chemicals, procedures or equipment that have any unusual hazards inherent in their use, the author must clearly identify these in the manuscript. If the work involves the use of animals or human subjects, the author should ensure that the manuscript contains a statement that all procedures are performed in compliance with relevant laws and institutional guidelines and that the appropriate institutional committee(s) has approved them. Authors should include a statement in the manuscript that the informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

Disclosure and conflicts of interest

All authors should disclose in their manuscript any financial or other substantive conflicts of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed. Potential conflicts of interest like employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding should be disclosed at the earliest stage possible.

Fundamental errors in published works

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the journal editor or publisher and cooperate with them to retract or correct the paper. If the editor or the publisher learns from a third party that a published work contains a significant error, it is the obligation of the author to promptly retract or correct the paper or provide evidence to the editor of the correctness of the original paper.

Duties of editors

Publication decisions

The editor of a peer-reviewed journal is responsible for deciding which of the articles submitted to the journal should be published, often working in conjunction with the relevant society (for society-owned or sponsored journals). The validation of the work in question and its importance to researchers and readers must always drive such decisions. The editor may be guided by the policies of the journal's editorial board. He may also be constrained by legal requirements that are in force regarding libel, copyright infringement and plagiarism. The editor may confer with other editors or reviewers (or society officers) in making this decision.

Fair play

An editor should evaluate manuscripts for their intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

Confidentiality

The editor and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

Disclosure and conflicts of interest

Unpublished materials disclosed in a submitted manuscript must not be used in an editor's own research without the express written consent of the author. Privileged information or ideas

obtained through peer review must be kept confidential and not used for personal advantage. Editors should recuse themselves from considering manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or (possibly) institutions connected to the papers. (i.e. should ask a co-editor, associate editor or other member of the editorial board instead to review and consider). Editors should require all contributors to disclose relevant competing interests and publish corrections if competing interests are revealed after publication. If needed, other appropriate actions should be taken, such as the publication of a retraction or expression of concern. It should be ensured that the peer-review process for sponsored supplements is the same as that used for the main journal. Items in sponsored supplements should be accepted solely on the basis of academic merit and interest to readers and not be influenced by commercial considerations. Non-peer reviewed sections of their journal should be clearly identified.

Involvement and cooperation in investigations

An editor should take reasonably responsive measures in conjunction with the publisher (or society) when ethical complaints have been presented concerning a submitted manuscript or a published paper. Such measures will generally include contacting the author of the manuscript or paper and giving due consideration of the respective complaint or claims made and may also include further communications to the relevant institutions and research bodies. If the complaint is upheld, the publication of a correction, retraction, expression of concern, or other note may be relevant. Every reported act of unethical publishing behavior must be looked into, even if it is discovered years after publication. For editors who require details on recommended actions for particular types of ethics complaints, please consult our Publishing Ethics Resource Kit (PERK) .

Duties of reviewers

Contribution to editorial decisions

Peer review assists the editor in making editorial decisions. The editorial communications with the author may also assist the author in improving the paper. Peer review is an essential component of formal scholarly communication, and lies at the heart of the scientific method. Academy Publisher shares the view of many that all scholars who wish to contribute to publications have an obligation to do a fair share of reviewing.

Promptness

Any selected referee who feels unqualified to review the research reported in a manuscript or knows that its prompt review will be impossible should notify the editor and excuse himself from the review process.

Confidentiality

Any manuscripts received for review must be treated as confidential documents. They must not be shown to or discussed with others except as authorized by the editor.

Standards of objectivity

Reviews should be conducted objectively. Personal criticism of the author is inappropriate. Referees should express their views clearly with supporting arguments.

Acknowledgement of sources

Reviewers should identify relevant published work that has not been cited by the authors. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by the relevant citation. A reviewer should also call to the editor's attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which they have personal knowledge.

Disclosure and conflict of interest

Unpublished materials disclosed in a submitted manuscript must not be used in a reviewer's own research without the express written consent of the author. Privileged information or ideas obtained through peer review must be kept confidential and not used for personal advantage. Reviewers should not consider manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies or institutions connected to the papers.
